

- **Input range 1:4 up to > 1:12**
- **Transient range up to 3xU_{inmax}**
- **Excellent protection against shock and vibration**
- **Extreme good radio interference adjustable**
- **Suitable for surge and long term transients**
- **High efficiency**
- **Independent outputs**
- **Optional -40°C up to +85°C**
- **1,5kV AC Test voltage / 1 Min**

For railway / road / telecommunication / industry

® registered trade mark of company SYKO GmbH & Co. KG

Series SRI · D

Main points

Output:

- Voltage accuracy: $\pm 1\%$
- Regulation: $\Sigma (U_{in} + I_{out} \cdot T_u) \pm 1\%$
- Ripple: $< 5 \text{ mV}_{pp}$ (T 1:1 / 50MHz)
- Spikes: $< 100 \text{ mV}_{pp}$ (T 1:1/50MHz)
- Response time: $\Delta t = 50\% \leq 150 \mu\text{s}$
- Current limiting: $< 1,5 \text{ } I_{outmax}$
- Dynamically and statically protected against short circuit
- Potentially isolated Uout1 to Uout2/3

Input:

- Power consumption at no load: 0,9 Watt
- Remote on/off
- Inrush current limited (E.A.)
- Radio interference suppression better than EN 55022 A
- Various transient and EMV performance available

General:

- Overvoltage protection (Logic)
- Isolation voltage: 1,5 KV_{AC} / 1 Min
- Ambient temperature: -25°C / +70°C
- Ambient temperature: -40°C / +80°C
- Derating 1% / °C >70°C and current $\geq 2,5\text{A}$ only 1) >60°C
- Convection cooled
- MTBF: SN29500 2,1 Mio h / 40°C
- Shock / Vibration annex V
- Weight approx. 120 g
- Size: 90 x 65 x 22 mm³
- Other pin-assignments on request

Efficiency:

Output 1: 2,7-24V / Output 2/3: 5,1-18V

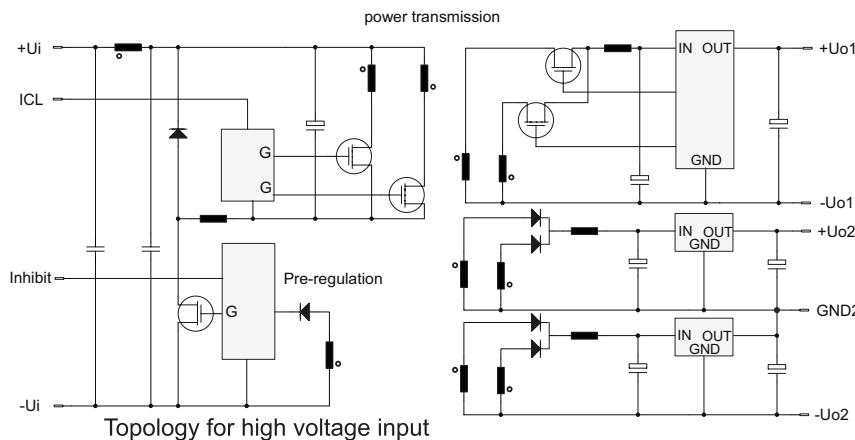

19 - 85 see above see above SRI-D 50-XX-XX-XX-XX

9 - 72 see above see above SRI-D 27-XX-XX-XX-XX

(H) -40°C up to +85°C On request

Modification costs for possible changes above values

Modules from the **SRI.D** (triple output) series are not potted. The high and constant efficiency and the in details patented system topologies with the result of high functionality are ideal for the use at extreme requirements. Transients are regulated because of the high dynamical voltage strength and absorbed in accordance to SYKO's application reports respectively (Patent-no. D 38004074 and EU 0402367). The use in accordance to railway, road car as well as standards of special technology (MIL/VG) is given.

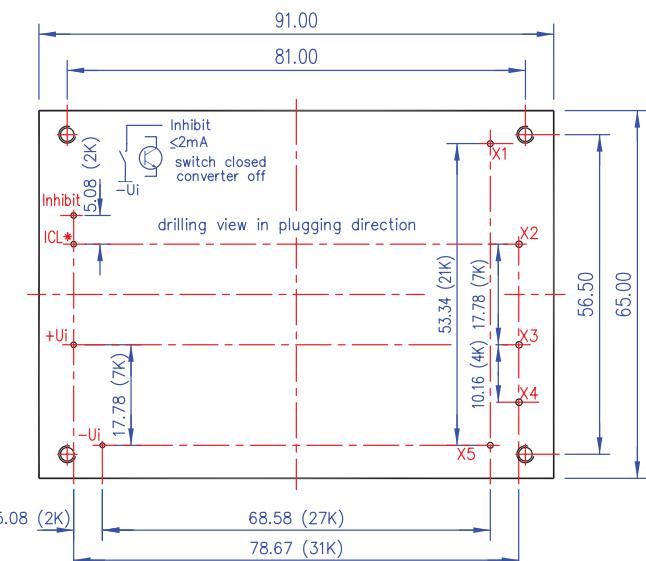

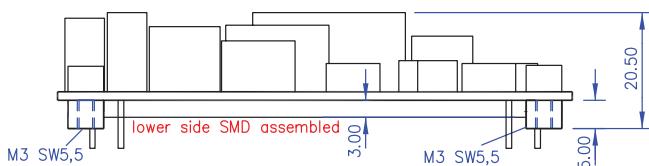

® registered trade mark of company SYKO GmbH & Co. KG

The outputs are magnetically pre-regulated without re-feeding. Each output is regulated by use of a low drop regulators and is short circuit proof to approx. 1,5 times I_{nom} . The outputs are functionally independent from each other and run-up against a short circuit (high capacitive loads). In the run-up situation and a connected load to $\pm U_{out}$ (series operation) a latch up can occur. The Inhibit-function (Inhibit) switches the input-no-load current to $< 2\text{mA}$. The ICL-option (Inrush Current Limiting-SYKO Patent- no. D 38004074 and EU 0402367) can limit the inrush current to any size of capacitors and long term transients can be limited active (application).

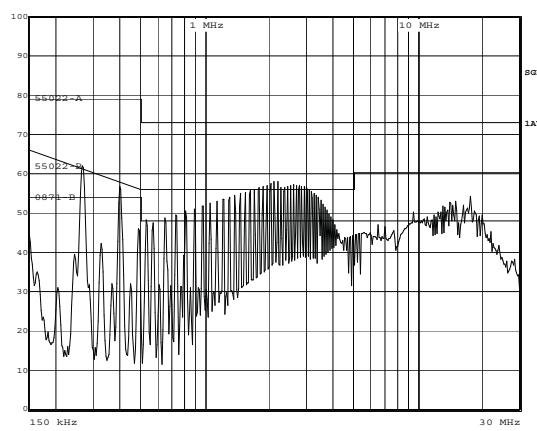

A thermal distribution of the power-hot spots is done with special designed PCB. The whole converter's surface is used for heat emission. An application report for an active reverse polarity protection (minimizing power losses), an active transient protection and inrush-current limiting as well as passive hold up time is available on request.

Pin-assignment

Pin	SRI	E	Z	D
X1	+Uo	+Uo1	+Uo1	
X2	-Uo	-Uo1	-Uo1	
X3	S+	+Uo2	+Uo2	
X4	-	-	GND _{O2}	
X5	S-	-Uo2	-Uo2
